(54) WATER-DISPERSION TYPE RESIN COMPOSITION AND ITS USE

(57)Abstract:
PROBLEM TO BE SOLVED: To obtain a water-dispersion type resin composition capable of simultaneously exceeding in low-temperature operability, luster, water resistance, weather resistance and stain resistance, useful for a coating material for exteriors.
SOLUTION: This composition is obtained by depolymerizing a high-molecular weight polyester containing two or more sulfonate groups in one molecule with an unsaturated basic acid or its anhydride to give an unsaturated polyester containing a sulfonate group and an ethylenic unsaturated group in one molecule and polymerizing a radically unsaturated monomer therewith in the presence of the unsaturated polyester. Especially a reaction between an epoxy group and an acidic sulfite is utilized as a method for introducing a sulfonate group into the high-molecular weight polyester.

LEGAL STATUS

[Date of request for examination]
[Date of sending the examiner's decision of rejection]
[Kind of final disposal of application other than the examiner's decision of rejection or application converted registration]
[Date of final disposal for application]
[Patent number]
[Date of registration]
[Number of appeal against examiner's decision of rejection]
[Date of requesting appeal against examiner's decision of rejection]
[Date of extinction of right]
